

# Non-destructive Anvil

## For tube seal testers

The tube seal tester ATS is the tool for checking the seal strength of plastic and metal-plastic tubes.

The integrity of the seal is verified by the absence of leakage under the effect of a crushing force applied to the test sample.

In this context, the non-destructive anvil does not degrade the envelope of the tested samples.

### Ease of use

- Adjustments by mobile stops.
- Repeatability of the tests: the tube is always installed in the same position.

### Adaptative

The inclined plane shapes allow a wide variety of tube designs to be tested.

### Technical information

Made of grey PVC	
Stop adjustments	Approximately 70mm on each side
Minimum distance between stops	Approximately 65 mm

### OPTIONS

Special shapes on -demand
